User Guide

healthCentric™
medical grade seating

BASIC CARE INSTRUCTIONS:

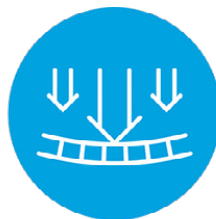

Use of hospital-grade cleaners and disinfectants is permitted. Our furniture has been formulated to withstand the most common hospital-grade cleaning and disinfecting agents such as Rescue, CaviCide, Wex-Cide, Virox 5 and bleach. The product has advanced durability, with no degradation when tested with over 1 million double cleaning rubs. Users may utilize repeat cleaning strokes when applying cleaning agents. For relevant models, our unique patented under-seat clip system allows for easy and thorough cleaning and disinfecting. Simply unclip and proceed with the cleaning process. No special tools are required.

Create a sealed and seamless design that acts as an impermeable barrier against fluids, dirt, bed bugs and pathogens to provide the ultimate infection control surface.

Material 5 to 10 times stronger than standard medical-grade vinyl for added longevity even if you're seeing hundreds of patients per day.

Resistance to punctures, tears, and cracks. This will last for at least 10 years, giving you a peace of mind.

A moisture-free barrier that resists bacteria, mold, and fluids so that you can keep using the same furniture for years to come without compromising the health of patients or staff.
